PROGCON - CHAPTER 1

55

Checked by: TAYAN

CLASS NUMBER: #12 SECTION: BTRM-1A1

NAME: LAURETA, Phia Marie M. DATE: Nov. 07, 2019

32

PART 1: Identify the following.

computer system 1. A combination of all the components required to process and store data using a computer.

Hardware 2. The equipment or physical devices that are associated with a computer.

software 3. The computer instructions that tell the hardware what to do.

Programs 4. The instruction sets written by programmers.

Application software 5. A type of software such as word processing, spreadsheets, payroll and inventory, even games

syntax errors 6. Errors in language or grammar.

System software 7. Software such as operating systems like Windows, Linux, or UNIX

input 8. Describes the entry of data items into computer memory using hardware devices such as keyboards and mice.

input symbol 9. Indicates an input operation and is represented by a parallelogram in flowcharts.

Output/ input symbol 10. Represented by a parallelogram in flowcharts.

Processing, data, access 11. May involve organizing them, checking them for accuracy, or performing calculations with them.

Data, items processing symbol 12. Indicates a processing operation and is represented by a rectangle in flowcharts.

CPU (central processing unit) 13. The hardware component that processes data.

output 14. Describes the operation of retrieving information from memory and sending it to a device, such as a monitor or printer, so people can view, interpret, and use the results.

output symbol 15. Indicates an output operation and is represented by a parallelogram in flowcharts.

programming language 16. Used to write computer instructions called program code; used to write programs.

Programming Language 17. Also includes languages such as Visual Basic, C#, C++, Java.

syntax 18. Grammar rules of a language.

syntax errors 19. Errors in language or grammar.

computer memory 20. The temporary, internal storage within a computer.

nonvolatile memory 21. Describes storage whose contents are retained when power is lost.

translator program 22. Translates a high-level language into machine language and tells you if you have used a programming language incorrectly.

compiler or interpreter

logical errors 23. Errors in program logic produce incorrect output

variable 24. A named memory location whose value can vary.

users or end users 25. People who benefit from using computer programs.

Documentation 26. Consists of all the supporting paperwork for a program.

Algorithm 27. The sequence of steps necessary to solve any problem.

Desk-checking 28. The process of walking through a program's logic on paper.

coding the program 29. The act of writing programming language instructions.

Logical error / syntax error / logic error 30. When instructions are performed in the wrong order, too many times, or not at all.

Logical Errors 31. Errors in program logic produce incorrect output

Test 32. Execute the program with some sample data to see whether the results are logically correct

Debugging 33. What is the process of finding and correcting program errors?

Conversion 34. The entire set of actions an organization must take to switch over to using a new program or set of programs

maintenance 35. Consists of all the improvements and corrections made to a program after it is in production.

PART 2: Enumeration

a. 3 major components of a computer system?
b. 3 major computer hardware operations.
c. 4 most common planning tools.
d. 3 most common flowchart symbols.
e. 7 steps on a program development life cycle.

a. 1. Hardware
2. Software system software
3. Humanware Application software

b. 1. Input
2. Processing
3. output

c. 1. Flowcharts
2. Pseudocode
3. IPO charts
4. TDE charts

d. 1. Terminal symbols
2. Processing symbol
3. Input / Output symbol

e. 1. Understand the problem
2. Plan the logic
3. Code the program / write the code
4. Translate the code
5. Test the program
6. Put the program into production
7. maintain the program
