

## **BLOCKLY GAMES**

As I research what is this all about, basically, blockly games are educational games designed by Google to teach and introduce people of all ages to programming. These innovative online tutorials and games give the possibility to enter the programming world by learning the logic of the programming language specially to those who don't have any prior coding experience.

In my point of view, honestly, I don't have any idea what blockly games is all about because it is my first time to hear about it. At first, when I started working on it, things come so easy and I have this question in my mind "eto na yun?". But at the time I finished the puzzle level, which I think is just a warm-up quiz, I don't even know what to do next. When I enter the maze level, oh yes! Kaya pa naman because you'll just have to follow and tell what path the icon should go to. But little by little, when you'd reached the level from 8 and up, things are becoming complicated, but I still do finish the maze level. As I open the bird level, oh no! ano ito?, I don't even know what to do at that time because it includes numbers and characters wherein I would be the one who will formulate the angle for me to accomplish the challenge. But then, I still do finish it. And this last level keeps me repeating to how this thing will work, and it is the turtle level. This part is literally the "hindi ko magets at hindi ko magets talaga" because this part has to do with the overall with the additional of looping which gives more challenge and complication to reach the success. But then, as I eventually knew how things work, I got to do it until the end.

Blockly games experience is such a mind blowing and draining kind of game wherein you should put effort, time and your logical mind to make thing work. Honestly, when I'm already pissed and this one level challenge ate a lot of my time, I search for some clues and hint at the internet and yes! It helped me a lot to finish this thing. But then, with all these challenge, I understand more how programming language works and I appreciate more the discussion done because application activities helps me to become more interested to the lesson and also it helps me even more to remember the functions of every syntax even though this is just a basic programming.
