

## *MY PROGCON CLASS EXPERIENCE*

Programming Concepts and Logic or commonly known as PROGCON, wherein this language is designed to communicate instructions to a machine, particularly to a computer. Also, this can be used to create programs that control the behavior of a machine and/or to express algorithms precisely. And a notation for writing programs, which are specifications of a computation or algorithm.

Having a PROGCON class is kind of a mixed emotions, as programming is not my forte. At first, it's a challenge for me because I'm not familiar with the concepts and the words that are being used. Secondly, me is being pressured because as what I've seen in the first few days, other being are already excelling while I'm still learning from it. Lastly, it's a matter of discipline, as I'm not a morning person, I used to wake up late and the PROGCON class starts at 7:30, so I must wake up early as I'm sluggish in the morning. But all those things sum up my entire experience in PROGCON because when I don't experience all those things, I think I won't succeed in the end. As what people say, with every difficulty there is a relief. Which means, you must work on for something and in the end, you'll get what you deserve. In this class, I've learned a lot of things; firstly, to enjoy what you are doing. Secondly, know the purpose of what you are doing. And lastly, be responsible in the class itself, don't be someone who will spoon-feed all the information to you. Rather, you must know how to work things out with yourselves because you might disturb someone with their thing. But sometimes, you also have to ask questions when you can't really figure it out because when you keep trying and still the same thing what you're doing, you're just wasting your time on it. Having our professor being friendly and approachable, helps the students to accomplish everything smoothly because she's one call away and will explain the things that bothers you. Student and professor relationship are one of the factors that will help students succeed and stands out to the class.

Overall, PROGCON class have been a good experience for me. Not just because of the subject itself but rather how the professor builds the atmosphere in the room wherein no pressure and no one is left behind. I just want to thank you Ms. Jen for being such a cool professor and understanding your student's tardiness in the morning. You will always be remembered. See you around.
