

### *MY FIRST PROGRAM USING FLOWGORITHM*

People says “Experience is a hard teacher. She gives the test first and the lessons afterwards”. In using flowgorithm, I never knew I would encounter this kind of subject and so I have a lot of first-time experiences. First, its my first time to be familiarize with the so called “codes”. Yes, I encounter them as many of my colleagues are in lined with courses under Information Technology or either Computer Science. But I don’t have any background about it; how it works and how things are being done since my strand is ABM, we just taught simple application particularly Microsoft. Second, it’s my first time to run a program. Yes, it’s a challenge for me because its like your talking to virtual robot because you should not be able to commit mistakes. Unless otherwise, the program would not work correctly or worst, it will not work. So, the key here it to listen very well to the teacher and do not be overwhelmed to such instructions that will be discussed. It’s a matter of analyzation and interpreting the instructions orderly and properly. Last, its my first time to use flowgorithm. Yes, it’s a free application that you can download, and it will help you to make things more easier. Besides of having displayed shapes and expression already. You can expand and boost your creativity while exploring flowgorithm as you can customize the colors of chart your doing.

My first program using flowgorithm is a mixture of fun and challenging. As I worked with this program, I learned that you should be dedicated on what you are doing because if your not interested and you don’t have the initiative to do every tasks, then don’t let yourself waste your time waking up early, going to class and just waiting the class to be dismissed. But for me, it was fun because being tourism student, I don’t just want to focus on what my specialization is, but rather I want to widen my knowledge to other subjects that are not in lined with my course because I might never know that these things would help me in the future. Even though is a bit challenge for me, at the end of the day, I will still be happy and fulfilled because I was able to finish on time and the program worked successfully. Learning and enhancing skills is one of the best thing to worked on nowadays.
